NOTES

SP01 | Proposed Unit 1
Working name Jaws Joint: planned home of James and Laura. Central section of the two-storey Lincolnshire stone barn, including the hay-barn-style front extension at the centre of the long elevation. Five brick arches; retention intended.

SP02 | Proposed Unit 2
Working name Boutique Airbnb: short-term let providing rental income for the Sharpe and Watchorn households. East flank of the two-storey barn, the section that returns around the corner. Oak king-post trusses to be restored; double-height spaces. Existing double-height barn opening in the east elevation to be infilled with a large arched glazed opening.

SP03 | Proposed Unit 3
Smallest unit, at the west end of the barn: cottage for sale. If funds are limited, option to complete as a watertight shell for later use or sale. Size unknown until the division with Unit 1 is set; James to decide from the area plans showing approximate gross floor area of each unit.

SP04 | Sharpe Residence
Original farmhouse of the farmstead, home of the Sharpe family. A substantial existing dwelling.

SP05 | Timber-clad agricultural barn
TO BE REMOVED. Simple framed agricultural barn with timber cladding and an asbestos-cement roof. Roof: dual-pitched section and lean-to, split approximately one-third and two-thirds of the length. Large central opening for agricultural machinery.

SP06 | Open-sided vehicle barn
TO BE REMOVED. Large open barn, used mainly for vehicle storage. Low-pitched roof of rusted corrugated sheeting. Stone walls enclose the east side; open to the courtyard on the west side.

SP07 | Single-storey west range
TO BE REMOVED. Single-storey range of agricultural sheds and stores, running north to south along the west flank of the barn. Two-thirds slate-roofed to match the two-storey barn; one-third dilapidated, near-flat corrugated sheeting. Structure failing. Unlike SP05 and SP06, part of the original barn. Ask the LPA whether conversion of at least the slate-roofed part is preferred. That part could give Unit 3 courtyard-facing kitchen accommodation if James takes more of the central courtyard.

SP08 | View north from arches
View north from the arches of the barn's north elevation. Ground falls approximately 30 m towards the main road, with a view into the valley; fall to be confirmed by survey. Trees and the transformer at SP09 obstruct the view: tree removal and relocation of the transformer discussed. Glazing proposed between the arches, to the Unit 1 main kitchen.

SP09 | Electrical transformer
Approximate location of the existing electrical transformer, mounted on a tall pylon. Not surveyed by Noble Architecture. Ownership, public or private, and extent of the infrastructure unknown. Engage a specialist before any relocation; costs may be significant. Noble Architecture accepts no responsibility for its location or for any consequences of removing or relocating it.

SP10 | Main farm access
Main access road into the central farmstead; the farm holding is much larger. This end stretch runs east to west around the corner of the barn, then north to south past the Sharpe Residence to a parking area.

SP11 | Overgrown courtyard
Courtyard between the barn ranges: heavily overgrown and derelict. Strip back and clear the whole area. Survey unreliable here: vegetation blocked the photogrammetry images, so much of this area is estimated. Resurvey the whole area after clearance.

SP12 | Driveway past Sharpe Residence
Driveway running north to south along the east side of the Sharpe Residence, between the house and the barn's single-storey west range at SP07. Continues down to SP13 and SP14.

SP13 | Sharpe Residence parking
Main driveway and parking for the Sharpe Residence.

SP14 | Auxiliary agricultural building
Agricultural barn, presumed still in active use; use unknown. Outside the proposed works. Marked for reference only; no measurements taken.

GN01 | Massing survey only
Feasibility massing survey of the barn: external envelope, overall massing and gross floor areas, for spatial blockout and early costing only. Do not use for planning drawings, structural design, procurement, fabrication or construction. Take no internal layout or dimension from these drawings or the 3D model.

GN02 | Exclusion of liability
Survey, drawings and 3D model provided free of charge as a favour. So far as the law allows, Noble Architecture accepts no liability to the client or any third party for any use of, or reliance on, this information. Anyone relying on it does so at their own risk.

GN03 | Full measured resurvey required
Client to commission a full measured resurvey with a GeoSLAM ZEB Revo 3D laser scanner before a planning application is prepared: an internal digital twin of the barn and a more accurate capture of the external envelope, tied to a fixed site datum, with an existing conditions report.

GN04 | Survey method and datum
Drone photogrammetry survey of the exterior, 26 September 2026, scaled and aligned to temporary ground control points. No fixed site datum, level or grid: all levels and positions are relative to an arbitrary datum. Elevations drawn from orthographic photographs of the survey model. Records the site as seen on that date.

GN05 | Photogrammetry limitations
Photogrammetry records only what the drone camera saw clearly. Glazing, reflective, dark, uniform or shadowed surfaces, soffits, recesses and anything screened from view are distorted, incomplete or estimated. Fine detail such as cills, reveals, eaves, verges and rainwater goods is not reliably captured. Accuracy depends on image coverage, lighting and the control points.

GN06 | Areas hidden by foliage
Foliage hid parts of the buildings and ground from the drone. There the survey is estimated or blank: no guarantee is given of what lies within or behind foliage, including walls, openings, structures, ground levels and obstructions. Clear vegetation and resurvey before relying on these areas. Courtyard to SP11.

GN07 | Inferred internal layout
No building was entered: buildings and roofs were reported dangerous. Apart from the arched area on the north elevation, none is open to the elements, so interiors were not captured. Internal walls and spaces shown are guesswork, inferred from external building lines and the few internal surfaces photogrammetry recorded; other internal walls may exist. Plan drawn only to give rough floor areas for feasibility and costing, before full design services, a planning application package and the survey it requires.

GN08 | Not surveyed
Not surveyed or assessed: interiors, including floor levels and wall thicknesses; roof structure; foundations; structural condition; below-ground and overhead services and drainage; boundaries and legal ownership; trees; ecology; asbestos and other hazardous materials.

GN09 | Dimensions, levels and areas
Do not scale. Dimensions, levels and areas are approximate; levels are relative to the arbitrary survey datum. Verify on site before use. Gross floor areas are for testing the division of the barn into units only; not for valuation, sale, letting or funding.
