

EXISTING CONDITIONS

PROPOSED SCHEME

Northern Elevation Design Notes

The Northern Elevation forms the side of the property facing the neighbouring dwelling The Elms and is the side elevation alongside which the two storey side extension rises.

EN01 | No New Openings To The Northern Side Elevation

The two-storey side extension (mass DV01) rises over the existing garage footprint alongside this boundary, and the treatment of this elevation has therefore been governed by the protection of the neighbouring dwelling's privacy. No new side-facing windows are introduced at any level on this elevation, or indeed anywhere on the proposal. First-floor side windows were actively considered during the design process and were advised against by both the architect and the planning consultant precisely because they would have introduced a new and direct line of sight towards the neighbouring dwelling; that advice was accepted by the applicant in full. The new work presents to this side as quiet rendered wall and tiled roof plane only, and the existing side-facing windows of the dwelling are retained unchanged. The complete privacy assessment is set out at Section 7.0 of the Design and Access Statement.

EN02 | Blank Garden Room Flank Facing The Nearest Neighbour

The garden room (mass DV03) presents its entire north flank to this boundary as a completely blank, windowless wall beneath a low, dark standing seam roof. Not a single opening faces the neighbouring dwelling from this structure. The contrast with the existing condition is instructive: the structure it replaces is a fully glazed greenhouse whose north side currently presents partly glass, mostly brickwork towards the neighbour. In its place the proposal offers a quiet, enclosed garden building on materially the same base footprint, set down with the falling ground, that can never generate any overlooking whatsoever. The exchange is a clear improvement in the neighbouring dwelling's outlook as well as in the appearance of the site, and the replacement of the greenhouse is set out in full at note E501 and Section 10.0 of the Design and Access Statement.

EN03 | Subservient New Roof Plane Over The Garage Wing

From the north the new roof over the remodelled garage wing (mass DV01) reads as a single clean tiled plane rising from low eaves, with its ridge held below the main ridge of the host dwelling. The junction with the host is resolved below the main gable, which continues to dominate the composition from this side exactly as it does from the street.

EN04 | Existing Flat Roof And Upstands Swept Away

The existing felt flat roof, together with its exposed upstands and rooftop clutter, is swept away entirely, and the dashed line on the proposed elevation records how little of the former arrangement survives. What the neighbouring dwelling presently overlooks as a cluttered flat roofscape becomes a single tidy plane of plain clay tiles to match the main house.

EN05 | Unbroken Roof Plane With No High Level Openings

The new first-floor accommodation takes all of its daylight from the two west-facing front dormers (note EW04), so the roof plane presented towards the neighbouring dwelling remains entirely unbroken, with no rooflights or openings of any kind introduced at high level on this elevation.

EN06 | Rear Extension Parapet Line

The single-storey rear extension (mass DV02) appears on this elevation only as a low, calm parapet line held well below the first floor of the host dwelling. The extension introduces no massing, no openings and no activity towards this boundary; it simply extends the quiet horizontal datum established by the existing single-storey elements of the dwelling, as described at notes DV02 and EE02.

EN07 | Roof Lantern Profile

Above the parapet line a roof lantern reads as no more than a slim, almost frameless glazed profile. The Korniche system's ultra-slim sightlines ensure that no competing roof form is introduced towards the boundary, and the lantern serves only to draw daylight downward into the plan, it is entirely incapable of generating any overlooking.

EN08 | Standing Seam Roof To The Garden Room

The long north-facing roof of the garden room is finished in dark standing seam metal to match its walls, laid as a single low plane whose fine, consistent seam rhythm and concealed fixings give the neighbouring outlook a calm and orderly surface in place of the existing greenhouse glazing. The roof is kept deliberately low, rising only marginally above its eaves and set down further still with the falling ground, so that from the neighbouring side the entire structure reads as little more than a quiet garden wall beneath a slender metal roof. The material and its rationale are recorded at notes DV03 and ES08, and the finish is a high quality, durable and low maintenance system appropriate to a garden building in this position.

EN09 | The Quietest Face Of The Scheme

Taken together this elevation is deliberately the quietest face of the proposal. The neighbouring dwelling sees retained and unchanged openings on the host, matched plain clay tiles on the new roof, soft-toned monocouche render on the new walls, and the dark recessive flank of the garden room, all in accordance with the materials strategy tabled at Section 5.2 of the Design and Access Statement. Every design decision on this side, from the windowless garden room to the unbroken roof plane and the rejected first-floor side windows, was taken with the amenity of the adjoining occupier in mind, and the elevation demonstrates that the scheme grows substantially in accommodation while presenting almost nothing new to its closest neighbour.

General Note | Planning Purpose Only

This document and the associated drawing pack have been prepared explicitly and exclusively for the purpose of a statutory householder planning application. To ensure absolute clarity for the local planning authority assessing the scheme the document pack is intentionally lightweight. It deliberately omits detailed technical specifications including structural arrangements wall compositions thermal insulation details and floor or roof build ups. Consequently these documents are strictly not fit for construction purposes procurement or Building Regulations approval. Comprehensive technical design and structural engineering plans must be commissioned and approved at a subsequent stage prior to the commencement of any physical works.

Contractor Responsibilities And Verification

The appointed building contractor is solely responsible for verifying all dimensions site levels and existing boundary conditions prior to the commencement of any fabrication ordering of materials or construction works. Any discrepancies found between these preliminary planning drawings and the physical site must be reported immediately to Noble Architecture and the client. The contractor must not scale directly from these drawings for construction purposes. The appointed principal contractor assumes full responsibility for ensuring all executed works comply strictly with current Building Regulations local authority requirements and all relevant health and safety legislation.

Limitation Of Liability And Indemnity

Noble Architecture shall not be held liable for any direct indirect or consequential loss injury or damage arising from the unauthorised use of these drawings for any purpose other than obtaining town and country planning permission. The client and any subsequently appointed contractors fully indemnify Noble Architecture against any claims financial costs or legal liabilities resulting from the misuse of these drawings for construction pricing structural implementation or Building Control submissions. By proceeding with the project beyond the planning phase the client formally acknowledges the necessity of engaging appropriate technical professionals for the detailed construction phase.
