3D VISUAL | DESIGN PROPOSAL - STREET FACING VIEW

EXISTING CONDITIONS

3D VISUAL | EXISTING CONDITIONS - STREET FACING VIEW

3D Perspective Visuals Notes

This is the principal, street-facing (Lowdham Road) frontage of the dwelling and carries the retained Tudoresque character.

EW01 | Subservient Roof Height Of The Two Storey Side Extension

The defining move of this elevation is the clear and deliberate difference in roof heights between the new side extension and the host dwelling. The ridge of the new cat-slide roof is held approximately 750 mm below the ridge line of the main house, as dimensioned on this elevation, and its front roof plane is additionally stepped down and broken away from the main roofline. The two-storey side extension (see also note DV01) therefore always reads as the lesser layer, and the original Tudoresque dwelling unmistakably remains the dominant structure in the street scene. This subservience is not incidental: it is the product of the massing strategy at Section 6.0 of the Design and Access Statement, which caps the wing's height and gives so much of the composition over to roof that the wing reads as a smaller mass than the flat-roofed garage structure it replaces.

EW02 | Replacement Of The Existing Flat Roofed Garage Structure

The existing garage wing presents very poorly to Lowdham Road. It is a cheap-looking, flat-roofed box finished with an exposed felt roof, its upstands and rooftop clutter laid bare to the street, and it reads as a temporary and expedient structure appended to a house of otherwise considerable quality. The proposed elevation replaces this uninspiring element with a properly roofed, permanent-looking building. The new pitched cat-slide roof, finished in plain clay tiles to match the main house, gives the wing the settled appearance of a structure that has always belonged to the dwelling, and it does so unobtrusively: the improvement is achieved through considerate angular roof form and strict material fidelity rather than through any attention-seeking addition. The existing and proposed conditions are compared directly at Figures 5.1 and 5.2 of the Design and Access Statement.

EW03 | Cat Slide Roof Form & Massing Rationale

The cat-slide roof form was selected after trying multiple other massing forms, recorded at Section 5.1 of the Design and Access Statement. An option carrying the mock-Tudoresque panelling across the front of the wing behind a stepped-back vertical wall was consciously discounted: it drew far too much attention to the addition and, given the awkward proportions of the garage beneath it, would always have read as a poor copy of the genuine frontage. A further option carrying the spire finials of the main gables onto the new element was superseded for the same reason, competing with rather than deferring to the host. The cat-slide form was chosen precisely because it does the opposite. It introduces a quieter, angular mass in which roof predominates over wall, it avoids any imitation panelling that could dilute the authentic character of the retained frontage, and it softens the front massing of the wing so that the eye passes over it to the principal elevation.

EW04 | Dormer Windows To The New Roof

The two new dormers are deliberately modest. Each is smaller than the existing front bay windows of the dwelling, and both sit low within the new roof plane so that they read as incidents in the roof rather than as competing features. The dormer cheeks are finished in a grey lead-effect material, and the dormer windows will be white UPVC to match the existing windows on the front of the property, maintaining the established white window palette of the principal elevation. The dormers face only the applicant's own front garden and Lowdham Road, exactly as the existing front windows do, and accordingly raise no overlooking issue, as set out at Section 7.0 of the Design and Access Statement.

EW05 | No New Side Facing Windows

No new side-facing windows are introduced anywhere on the proposal. The only new openings on the remodelled wing are the two front dormers described at note EW04. The side-facing windows that remain on the dwelling are the existing openings, and their outlook is entirely unchanged. First-floor side windows were actively considered during the design process and were advised against by both the architect and the planning consultant precisely because they would have introduced a new and direct line of sight towards the neighbouring dwelling. That advice was accepted by the applicant in full, and the complete privacy position is set out at Section 7.0 of the Design and Access Statement.

EW06 | Retained Frontage And Strictly Matched Materials

Aside from the remodelled garage wing, the principal Tudoresque frontage is retained unaltered: the black and white applied framing, the two-storey front bays, the Ionic-columned entrance porch and the white render are all untouched by the proposal. The new work matches the retained palette in strict fidelity. The roof is plain clay tiling to match the main house; the wing's front wall is white render to match; the white sectional garage door is retained, or replaced like for like in white; and the wing's mismatched white fascias and soffits are brought into line with the black used across the main house. The full materials schedule for this elevation is tabled at Section 5.2.1 of the Design and Access Statement.

General Note | Planning Purpose Only

This document and the associated drawing pack have been prepared explicitly and exclusively for the purpose of a statutory householder planning application. To ensure absolute clarity for the local planning authority assessing the scheme the document pack is intentionally lightweight. It deliberately omits detailed technical specifications including structural arrangements wall compositions thermal insulation details and floor or roof build ups. Consequently these documents are strictly not fit for construction purposes procurement or Building Regulations approval. Comprehensive technical design and structural engineering plans must be commissioned and approved at a subsequent stage prior to the commencement of any physical works.

Contractor Responsibilities And Verification

The appointed building contractor is solely responsible for verifying all dimensions site levels and existing boundary conditions prior to the commencement of any fabrication ordering of materials or construction works. Any discrepancies found between these preliminary planning drawings and the physical site must be reported immediately to Noble Architecture and the client. The contractor must not scale directly from these drawings for construction purposes. The appointed principal contractor assumes full responsibility for ensuring all executed works comply strictly with current Building Regulations local authority requirements and all relevant health and safety legislation.

Limitation Of Liability And Indemnity

Noble Architecture shall not be held liable for any direct indirect or consequential loss injury or damage arising from the unauthorised use of these drawings for any purpose other than obtaining town and country planning permission. The client and any subsequently appointed contractors fully indemnify Noble Architecture against any claims financial costs or legal liabilities resulting from the misuse of these drawings for construction pricing structural implementation or Building Control submissions. By proceeding with the project beyond the planning phase the client formally acknowledges the necessity of engaging appropriate technical professionals for the detailed construction phase.

Copyright And Intellectual Property

All designs architectural drawings written specifications and intellectual property contained within this document remain the exclusive statutory property of Noble Architecture. These documents may not be reproduced altered or distributed to third parties for any purpose other than the specific planning application at the application site without the express written consent from Noble Architecture.
