GN21 - Height Setting Out Dimensions

Extreme care is required when reading all height-related dimensions. Users of these drawings must carefully check the termination points of each height dimension to confirm which Finished Floor Level datum applies. The Global Project Datum is defined as the existing Finished Floor Level of the Main Cottage Dining Room (Lower Level). All vertical dimensions indicate the top of the final finished floor surface and do not represent structural slab, screed, or sub-floor levels.

The Contractor shall therefore calculate all structural and sub-floor levels by deducting the confirmed thickness of the final floor finish and any adhesive or levelling build-up once selected by the Client. The site comprises two separate and distinct finished floor planes, being the Lower Level at the Main Cottage and the Higher Level at the Smaller Cottage, connected by steps within the new extension. Care must therefore be taken at all times to verify which of the two Finished Floor Levels a dimension terminates at. Where any ambiguity exists, Noble Architecture should be contacted for clarification prior to setting out.

SD01 - Structural Layout And Coordination Disclaimer

Under no circumstances is this drawing to be interpreted as the detailed structural design, fabrication schedule, or manufacturing instruction. This document is provided solely to assist the Principal Contractor in coordinating the spatial layout of structural members within the broader architectural scheme detailed by Noble Architecture. All specific member sizes, material grades, connection details, and load-bearing specifications must be sourced directly from the appointed Structural Engineer's approved plans, calculations, and reports. This drawing indicates setting out and architectural integration only; the Structural Engineer's documentation takes absolute precedence for all structural integrity and technical detailing matters.

AN03 - Picture Window Opening Reduced

Existing picture window opening in the old Holiday Cottage to be reduced in width as shown, to form a new masonry nib and accommodate a new replacement set of double doors at low level and a new window at first-floor level above. The picture window opening has been reduced in width to ensure that the new extension porch flat roof can abut the old Holiday Cottage cleanly without fouling the window frame, and to create a tidy masonry nib for the porch detail and roof abutment.

GN12 - Pre-Fabricated And Manufactured Elements

All prefabricated, bespoke, and manufactured elements, including but not limited to windows, doors, rooflights, glazing systems, stair components, and structural steelwork, shall be subject to full on-site measurement by the relevant manufacturer or fabricator prior to manufacture. Dimensions shown on these drawings are indicative only and represent design intent in a notional or“perfect world” condition. They shall not be relied upon for fabrication without independent site verification.

The Contractor is responsible for ensuring that all manufacturers, suppliers, and fabricators undertake their own site surveys and confirm all critical dimensions, levels, tolerances, and interfaces prior to production. Any discrepancies between site conditions and the drawings shall be reported to Noble Architecture immediately and resolved before manufacture proceeds. No prefabricated element shall be ordered or fabricated solely on the basis of drawing dimensions. Structural steelwork shall be measured, detailed, and fabricated in accordance with BS EN 1090 and Eurocode 3, and windows and rooflights shall comply with the relevant product standards and BBA certification requirements.

ED10 - Main Entrance Pivot Door & Threshold

The main entrance to the new extensions is a approx. 1200mm pivot door is detailed over a stone cill. The pivot mechanism shall strictly not be fixed to the cill or bedding; structural anchorage must be achieved via a spigot or sub-frame passing through the stone cill fixing directly to the masonry / foundation.

Detailed design responsibility for this structural fixing system and a compatible weathering threshold lies with the Specialist Pivot Door Manufacturer. The Contractor shall instruct the Manufacturer to supply these specific details to Noble Architecture for integration and review prior to manufacture, A premium brand shall be sought with a dedicated and reliable bespoke technical department.

GN11 - Length Dimensions

All dimensions shown are to structural opening sizes or to coarse construction, representing bare wall dimensions only, including masonry openings, brickwork, blockwork, and studwork, unless expressly stated otherwise within the dimension text. These dimensions do not include plasterboard, internal linings, wall finishes, cladding systems, service voids, or applied finishes of any kind. As a result, final finished room sizes will be smaller than the dimensions shown once linings and finishes are installed. The Contractor shall allow for all required finishes, build-ups, and construction tolerances when setting out and carrying out the works.
