Proposed Scheme - Ground Floor Plan

First Floor Design Notes

The following notes record the reconfiguration of the first floor around the new accessible accommodation for the applicant's ageing parents, as set out in full at Sections 4.5 and 13.2 of the Design and Access Statement.

FF01 | Accessible Bedroom Suite (Bedroom 4)

The existing fourth bedroom, which presently serves as a children's playroom, is converted into an accessible bedroom suite for the applicant's ageing parents, who are anticipated to join the household within the next year or two. The room was selected because it sits directly ahead at the head of the staircase: the stair rises in a single straight flight, has already been reviewed for the future retrofit of a stairlift and associated accessibility aids, and delivers this room—uniquely among the bedrooms—entirely on the level, avoiding the additional step that guards two of the other bedrooms beyond the landing. No new external openings are required to form the suite and the existing fenestration of the room is retained.

FF02 | Transferred Accessible En Suite Bathroom

The existing en suite serving the master bedroom (Bedroom 1) is transferred in its entirety to the new accessible suite, providing the parents with a bathroom reached wholly from within their own bedroom. The room will be fitted out for accessible use, with generous manoeuvring space and provision for the future installation of mobility aids, so that it can adapt as the occupants' needs change. This approach follows the national Planning Practice Guidance on housing for older and disabled people, which advises that accessible provision is best built in from the outset rather than adapted at a later stage. All sanitaryware, drainage and ventilation alterations must be designed and installed in full compliance with current Building Regulations.

FF03 | Blocked-Up Door Between Bedroom 1 And The Transferred En Suite

The existing door opening between the master bedroom (Bedroom 1) and its former en suite is blocked up, with the infill finished flush and made good to match the adjoining wall surfaces on both sides. This closure separates the two suites completely, securing the privacy of the parents' accessible bathroom and of the master bedroom alike.

FF04 | New Door Opening From Bedroom 4 Into The Accessible En Suite

A new door opening is formed from the accessible bedroom directly into the transferred en suite, so that the bathroom is reached wholly from within the parents' own room without recourse to the landing. The opening is to be provided with an appropriately specified lintel in accordance with note ST01, and its clear width and threshold detail should be selected at fit-out with accessible use in mind.

FF05 | Removal Of The Redundant Chimney Breast (First Floor)

The redundant chimney breast projecting into the accessible bedroom is removed at first floor level, together with its counterpart at ground floor level (note GF03). The chimney is long disused and its external stack was removed above the roof line many years ago, so no change to the roofscape or external appearance arises. The removal releases the full wall line of the room and permits a far more flexible layout in which a large accessible bed can be positioned with clear circulation space to both sides. The removal sequence and the support of any retained masonry are subject to the structural provisions of notes ST01 and ST02.

FF06 | Re-Provided Master En Suite And Dressing Room Above The Garage

The master en suite displaced by the transfer at note FF02 is re-provided within the new accommodation formed above the existing garage (mass DV01), together with a functional dressing room on the front side beneath the new cat slide roof, so that Bedroom 1 becomes a complete master suite. Because the new roof volume exists in any event, it is used to its full sensible extent rather than leaving half of the space redundant, which is the origin of the generous en suite proportions. The dressing room is lit by the two front dormers (note EW04) and the en suite by the single obscure-glazed rear window (note EE07). No side-facing openings are introduced at any point, in accordance with notes EN01 and EW05 and Section 7.0 of the Design and Access Statement.

ST01 | Structural Provisions - Chimney Breast Removal And New Internal Opening

Noble Architecture has identified the probable need for a structural column in the position indicated "ST01" on the proposed plans. This is due to the substantial span across the rear elevation, it is anticipated that mid-point support will be necessary to safely accommodate the required structural loads. While there remains a possibility that the attic truss manufacturer could engineer a solution utilising structural girders in lieu of a traditional steel beam(s) and column arrangement, this must be formally evaluated. This element is highlighted purely as a provisional point of discussion and is merely a flag. The definitive structural strategy, including all final load-bearing calculations and specifications, falls outside the scope of this appointment and must be independently confirmed and detailed by a qualified structural engineer during the subsequent Building Regulations stage.

ST02 | Technical Specifications And Structural Design

The proposed scheme involves significant structural alterations including the new pitched roof structure over the existing garage wing, the large glazed structural openings serving the single-storey rear extension, the removal of a redundant chimney breast at ground and first floor level, and new and infilled internal openings at first floor. All load-bearing elements including steel beams, lintels, roof structures and foundations must be independently designed, specified and certified by a fully qualified structural engineer. Furthermore, the contractor is responsible for all mechanical, electrical and plumbing designs, including the drainage connections serving the transferred and re-provided en suite bathrooms. Noble Architecture accepts no responsibility for the structural integrity or technical performance of the proposed design.

General Note | Planning Purpose Only

This document and the associated drawing pack have been prepared explicitly and exclusively for the purpose of a statutory householder planning application. To ensure absolute clarity for the local planning authority assessing the scheme the document pack is intentionally lightweight. It deliberately omits detailed technical specifications including structural arrangements wall compositions thermal insulation details and floor or roof build ups. Consequently these documents are strictly not fit for construction purposes procurement or Building Regulations approval. Comprehensive technical design and structural engineering plans must be commissioned and approved at a subsequent stage prior to the commencement of any physical works.

Contractor Responsibilities And Verification

The appointed building contractor is solely responsible for verifying all dimensions site levels and existing boundary conditions prior to the commencement of any fabrication ordering of materials or construction works. Any discrepancies found between these preliminary planning drawings and the physical site must be reported immediately to Noble Architecture and the client. The contractor must not scale directly from these drawings for construction purposes. The appointed principal contractor assumes full responsibility for ensuring all executed works comply strictly with current Building Regulations local authority requirements and all relevant health and safety legislation.

Limitation Of Liability And Indemnity

Noble Architecture shall not be held liable for any direct indirect or consequential loss injury or damage arising from the unauthorised use of these drawings for any purpose other than obtaining town and country planning permission. The client and any subsequently appointed contractors fully indemnify Noble Architecture against any claims financial costs or legal liabilities resulting from the misuse of these drawings for construction pricing structural implementation or Building Control submissions. By proceeding with the project beyond the planning phase the client formally acknowledges the necessity of engaging appropriate technical professionals for the detailed construction phase.
