

Scheme Introduction - Proposed Detached Double Garage

This application seeks approval for the construction of a new detached single-storey double garage. The primary objective is to provide necessary secure domestic storage and a dedicated home gym, directly addressing spatial constraints and decluttering the applicant's dwelling.

Design & Material Selection

The proposal is explicitly designed to remain subservient to and in strict visual accordance with the host dwelling. The material palette replicates the existing house to guarantee aesthetic cohesion. Key matching elements include silicone-based monocouche external render, roof tiles matching the existing style and colour, garage and pedestrian side doors finished to the exact RAL colour code of the existing property, alongside fascias and soffits specified in the same soft blueish tone as the main house.

Scale & Street Scene Continuity

To protect the local streetscape and alleviate any highway-facing height concerns, the proposed massing has been directly informed by the neighbouring property. The garage width, height, and lowered roof pitch purposefully replicate the adjacent neighbour's garage. This design choice ensures street scene continuity, balanced proportions, and guarantees the structure introduces no greater visual impact or massing than what is already established on the street.

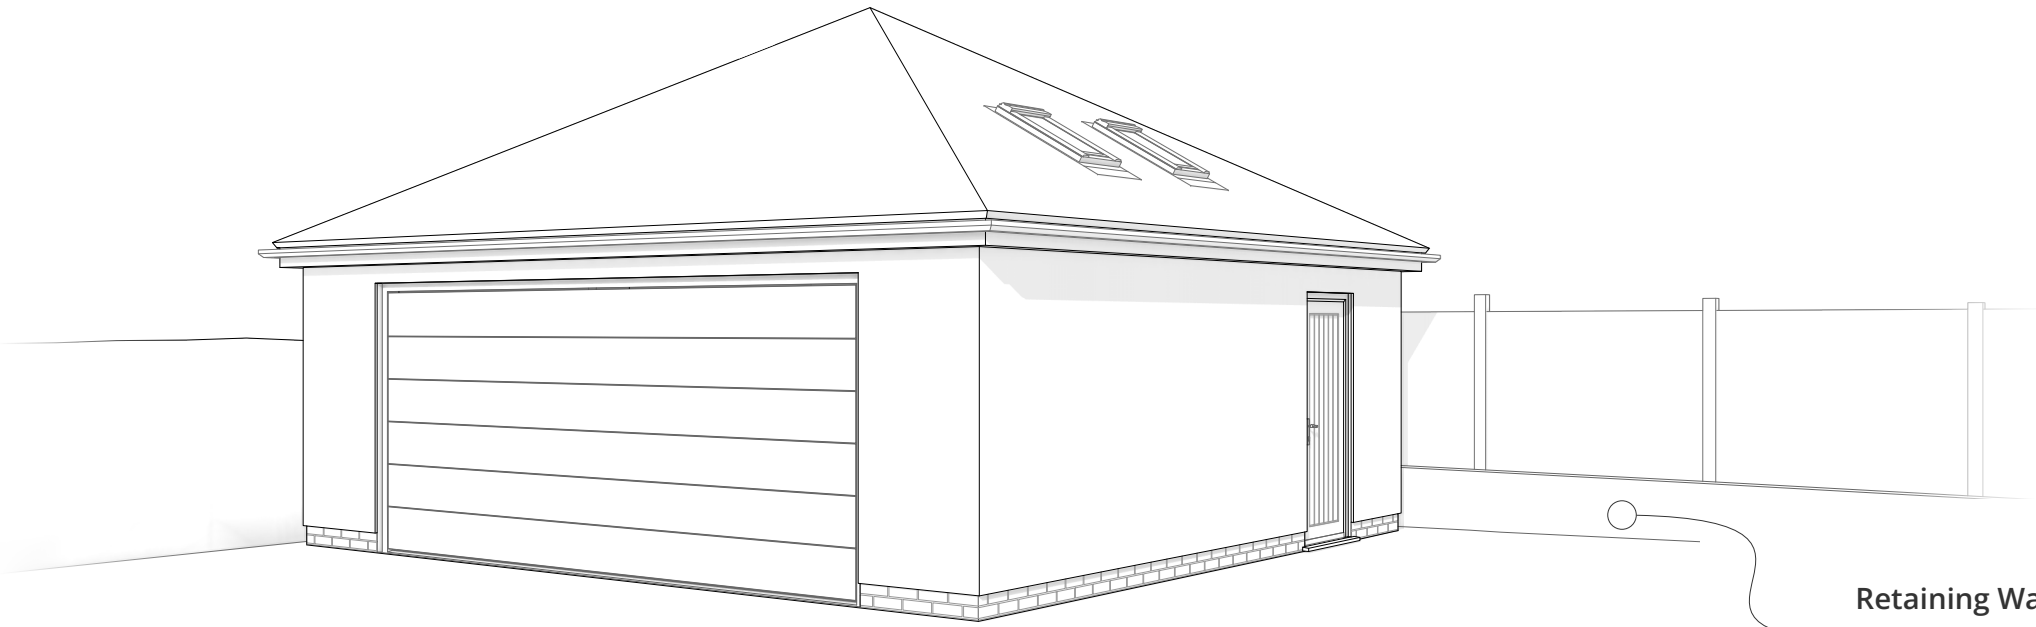

Boundary & Site Integration

The existing vehicular access and width are retained without alteration. The proposal enhances the street frontage by replacing a tall, unmanaged hedgerow with a high-quality brick boundary wall featuring painted horizontal slatted infill panels, supplemented by a managed ornamental hedgerow. The design also carefully resolves existing site topography by incorporating a new retaining dwarf wall to manage the 450mm ground level difference with the neighbouring terrace.

Garage Door
Primary access via a double-width sectional or roller garage door with horizontal panelling, finished to match the existing house RAL colour code.

Proposed Garage Concept 3d Visual

Retaining Wall
Existing retaining plinth replaced by a new straightened dwarf wall to retain the ground level difference between the neighbouring property and the applicant's site.

Planning Permission Drawing
Drawings are for planning approval and tendering purposes only. Separate Building Regulations approval is required, as these documents do not contain the detailed design necessary for compliance.

Neighbouring Context
Proposed garage massing (width, height, and roof pitch) closely replicates the neighbouring property's garage to ensure an equivalent scale and no greater visual impact.

Southern Boundary Treatment
Existing front wall and tall wild hedgerow replaced by a new brick boundary wall incorporating painted horizontal slatted timber or composite infill panels between brick piers. A smaller, managed ornamental hedgerow to be planted behind.
